

3-phase String Inverter-FAQ

Fault code and troubleshooting steps of 3-phase string inverters

Applicable to: 3-phase string inverters

Off-grid overvoltage (Code 064)

Fault name	Off-grid inverter overvoltage fault (fault code: 064)
Fault type	Fault
Fault condition	The effective value of inverter voltage is higher than the protection value under off-grid normal operation
Steps and methods of troubleshooting	Use a multimeter to measure the off-grid port voltage and compare it with the displayed value. If there is a big difference, it is judged that the sampling is abnormal, and it is recommended to replace the inverter.

Off-grid low frequency (Code 065)

Fault name	Off-grid port inverter low frequency fault (fault code: 065)
Fault type	Fault
Fault condition	The inverter frequency value is lower than the normal range under off-grid normal operation
Steps and methods of troubleshooting	If the fault remains, it is recommended to replace the inverter.

Off-grid high frequency (Code 066)

Fault name	Off-grid port inverter high frequency fault (fault code: 066)
Fault type	Fault
Fault condition	Inverter frequency value exceeds the standard under off-grid normal operation
Steps and methods of troubleshooting	If the fault remains, it is recommended to replace the inverter.
